Single Mom Parenting

Parenthood is defined as having parental responsibilities, meanwhile the term parent essentially refers to a father or a mother. Single parenting is a family in which one parent is responsible for raising one or more children on their own, without the assistance or involvement of a co-parent or partner. This can occur for a variety of reasons, including divorce or separation, the death of a partner, or a decision to have a child without a partner. Single-parent family can manifest itself in a variety of ways. Single parent households, on the other hand, are described as those who are raising children after becoming widowed, single by choice, or unmarried parents who live together and have children under the age of 18. A single parent is also a grandparent, uncle, or aunt as well. There are many factors that can contribute to single parenting. Here are some major causes such as: divorce, addiction, breakup, abandonment, domestic violence, rape, single-person birthing, or single-person adoption are among the causes of becoming a single parent.

Single mother parenting is a parenting style in which one parent, typically the mother, serves as both the primary caregiver and primary breadwinner for their children. In a broader definition a single mother is a woman who is raising a child or children on her own, without a partner or spouse. This can occur for a variety of reasons, such as divorce, separation, the death of a spouse or choosing to have a child without a partner as outlined above. As a single mother

parent, a mother has to take on all of the responsibilities of parenting, such as providing emotional support, meeting their child's basic needs, managing finances, making important decisions, and balancing work and parenting. Being a single mother can be challenging, but many single mothers successfully raise happy, healthy children with support of friends, family, and their community (Mansoor, 2023).

Single mothers who are parenting can encounter a variety of difficulties, including financial uncertainty, social isolation, and combining work and daycare. They may, however, come across positive factors in their communities that can provide support and assistance. There are many organizations, websites, programs, and government support provided for single moms to help and make the process of everything easier for them. Some possible prospects for the growth of single mother parenting in their communities include support networks: Single moms who are raising children may have access to support networks in their areas, such as local parenting groups or community centres that offer certain programs for children as well as guidance for moms on how to manage single parenting. These networks can give emotional support, social connections, and parental resources. Childcare assistance: Some communities provide low-cost or subsidised childcare options, which can be especially beneficial for single mothers with limited financial resources. Job training and employment possibilities: different communities provide job training programs or work opportunities to single mothers in order to help them achieve financial stability and independence. Single mothers have access to educational opportunities in their communities, such as community college or vocational training programs as well. This can help them learn new skills and advance their careers beside managing single parenting (Jo Gleason, 2021).

While there are many positives and resources in the community for single mom parents, there is also a negative side to it. Unfortunately, in many communities, single mothers confront negative attitudes and stereotypes. The following are some of the disadvantages of being a single mother in the community: Stigma and judgement: Others in the community may stigmatize and judge single mothers as "irresponsible" or "promiscuous." This stigma can be especially tough for single mothers who became single parents due to events beyond their control, such as divorce or the death of a partner. Financial difficulties: Raising children as a single mother can be expensive, especially if the mother is the primary breadwinner. Single mothers may find it difficult to make ends meet while also providing for their children's basic requirements. Limited social support: Single mothers who do not have a strong support structure in their community may feel isolated and alone. Their mental health and overall well-being may suffer as a result of a lack of social support. Obtaining acceptable childcare: Single mothers may have difficulty finding inexpensive, high-quality childcare that fulfils their needs. It may be difficult for individuals to work or seek other options, such as education or training, as a result of this. Lack of time for self-care: It can be difficult for single mothers to make time for self-care activities such as exercises or interests, which can be beneficial to their physical and mental health. This not only can lead to exhaustion and stress but depression and mental health issues (Agnafors et al., 2019).

Ottawa, Canada's capital city, includes several services and organizations that provide help and resources to single mother parents as well as other provinces in Canada. Here are some general information and details about some of these organizations and how they provide help. The Parent Resource Center is an organization that offers assistance, support, advocacy,

and education to single mothers and their families. They provide a variety of services, such as counseling services for individuals and families, support groups for parents, parent enrichment workshops for instance parenting infants and toddler group (birth to 2) child development and basic care, adolescent parenting group (13-17)**,** toddlers/pre-school group (2 to 4) parenting and discipline group, parent training classes, books, videos and other information focusing on parenting skills. Some programs they offer for children are drop-in centers home visiting, job training, substance use prevention, violence prevention and services for children with special needs (Parent Resource Center, n.d.). St. Mary's Home agency offers a variety of free programs for pregnant woman, single mom and dad parent services such as emergency shelter, continuing education, medical clinics, cooking courses, pregnancy groups, playgroups, counselling, child development programs, Infant and early mental health (IMH) Services and indigenous programs and services (St. Mary's Home 2022d). Parenting in Ottawa is an organization that provide many great supports for single moms for example, online help and counselling, drop-ins, home visits, prenatal classes, breastfeeding support, babies, toddlers and youth resources such as children's development, healthy eating, immunization, mental health, active physical play, dental health, behaviour and active transportation (Parenting in Ottawa, 2023). eMental Health/Youville center is another great center that assists single mothers in securing a better future for themselves and their children. Young women can complete their high school education while establishing good parenting abilities in a nurturing environment. In Youville's bright, child-friendly facility, their children benefit from a licenced early childhood development program. Some services they provide are housing and home support, medical services, counselling and therapy, education and training, support groups, mental health

professionals and basic needs (Youville Centre: Ottawa-Carleton, ON: eMentalHealth.ca, n.d.). All of these four helpful organizations can be reachable through their websites, booking appointments, email, number and visiting the centers in person.

As said above, there are several wonderful agencies around Ottawa as well as in various provinces that give a variety of great and useful services and resources for single mom parents, which I believe is amazing and a major assistance for single mom families. However, I do not believe there is enough support for this particular family type. The number of single mothers has increased throughout time, and it hasn't been easy because there are so many issues that a single mother faces on a daily basis. It is possible, although it is really tough, to be a single mother and have to take care of everything at the same time with no assistance. So many single mother parents must continually wait to be able to access the help and acquire the appropriate support from the various agencies because most of them are always full and the parent must go on a wait list and then be provided with that support when it becomes available again. It can be really difficult for a parent to shoulder all of the responsibilities while also caring for their children. As a result, having several agencies or organizations in the community can be a life-changing support for the family and can definitely make the life process much simpler for both the parent and the child. I believe that one great strategy to assist this particular family type is to bring the many groups together and create one large, trustworthy community. Consider forming a single parent support group in your area so that other single parents can get support and encouragement more easily. Listening to the parents' concerns, problems, issues, and the obstacles they face in order to survive, and then reporting back to the government so

that they can begin to assist the families and provide the needed support to address their requirements.

Single motherhood is a difficult yet rewarding responsibility that has become more frequent in recent years. While single mothers frequently face financial difficulties and societal stigma, they can also form close attachments with their children and set a good example of hard work and commitment. This essay has explored the challenges and positive aspects of single mother parenting in order to broaden our understanding of this often-underrepresented way of life and how we can all work together to build a trustworthy community to ensure they provide necessary support, help, and encouragement for this family type.
